

Privacy Policy

Foundation for Sport of South-Alföld

Introduction

Dél-Alföld Sportjáért Alapítvány (Foundation for Sport of South-Alföld, in short DSA, collectively, “DSA”, “us”, “we”, or “our”) operates (<https://www.e-nevezes.hu>), or through a mobile application or other cloud-based platform which we may make available for your use (collectively, the “Site”). This Privacy Policy informs you of our policies regarding the collection, use and disclosure of information we receive from users of the Site. Your use of the Site will constitute your acknowledgement of your consent to abide and be bound by the Privacy Policy.

Data of data controller

Name: Dél-Alföld Sportjáért Alapítvány (Fundation for Sport of South-Alföld)

Short name: DSA

Address: 6800 Hódmezővásárhely, Hősök tere 1.

Organisation registration number: 06-01-0001684

Tax ID: 19007407-1-06

E-mail: dsalapitvany@gmail.com

Website: <https://www.e-nevezes.hu>

Legal basis of data processing

According to Section 5 (1) of the Privacy Act, the legal basis for processing personal data is the consent of the data subject. When you register for our partner’s events or you create an account through our online registration system, you give your consent that the data detailed below may be processed. Apart from asking for your consent to data processing in general, we ask you to give your special consent to receive emails and text messages for marketing purposes. This consent can be withdrawn any time, regardless of other data. We have no grounds to refuse your participation in the events due to the withdrawal of such data.

Registering another competitor

Our experience shows that our customers require the opportunity to register their friends, family members or colleagues for our events. This simplified registration makes the life of runners and DSA easier as well. When registering a team, the team leader has to register the team members as well, as team members can only register together and we cannot expect the physical presence of all the members of the team.

Thus DSA provides the opportunity for its customers to register others for its events as well. In this case we assume and expect that our customer who is registering the others would have the consent of the people concerned about processing their data in connection with registration. It is usually not required to have a written consent to process personal data, consequently we do not want to overburden our customers with bureaucratic procedures, either.

Purposes and duration of data processing

General purposes of data processing of DSA:

- to identify and keep records of our customers and record registrations
- to organize our events to inform our customers and do our promotional activities

- to carry out financial accounting
- to compile statistics and analyses
- to identify those people who are entitled to special registration offers and match these special offers and customers
- to contact a family member given by the customer in case of medical problems in our events
- to improve the quality of our services and prepare new events

Customers in our database can register for our events any time in the future, so we should be able to identify them for an unlimited period of time. We might also need to be able to get access to the data for an unlimited period of time to provide special registration offers, to keep records of race series and for promotional purposes (to find those people who have entered a race the most times) Taking into the account the purpose limitation principle, we will store personal data of our customers in our database until the withdrawal of consent of our customers, that is to say we will only delete them on special request.

Data transfer to other countries

DSA does not transfer any personal data to other countries.

Scope of data processed

The scope of the data we process and the purposes of data processing will be specified below. It is important to highlight that DSA does not keep records of any special data about its customers. We only keep records of data given by our customers, and of values calculated from. We also keep records of race results (eg. net time, place, distance covered) and other data in connection with organizing races (race bib pick-up, confirmation of registration).

We keep records of data of financial transactions (date, amount of money, currency, amount of money paid, transaction ID in case of online registration). In our online registration system paying by payment cards is through the safe, 3-partner online payment system of Barion, where our customers give the data directly to the bank, so DSA is not in possession of any data about payment cards, and we do not process such data.

Start lists and lists of results

In most of our events we publish a start list and a list of results about the participants to enhance the purity and transparency of sports events just as it is done in other races in the world. The start list includes the following data about the competitor: name, date of birth, residence (only the name of the municipality), citizenship, gender, sports club, and age group in the given event. On this basis, everyone will see who they will compete with. The list of results might also include – apart from the data of the start list – chip and gun times, split times, distances covered, place (overall and category), as well as whether the participant was disqualified, did not finish or was given a time penalty. By registering for the events, our customers give their consent to the publication of their data in the start lists and the lists of results.

People who are authorized to have access to data

Personal data given by our customers can be accessed only by those employees who do tasks in connection with registration, as well as those ones who analyze, aggregate, assess data and those people who are responsible for informing our customers before and after the events. The people mentioned above include the following:

- people who register entrants and record data
- system operator, operator of our database
- financial workers

The location of our servers involved in data management

The location of the data management done by MediaCenter Hungary Kft. (6000 Kecskemét, Sosztakovics u. 3. II/6, cégjegyzékszám: 03-09-114492, adószám: 13922546-2-03).

Data stored on participants/customers

A The data listed below is used to identify the participants (e.g. to distinguish the participants with similar names), to contact them, to provide the service (e. g. to send out notifications regarding the races), to run the races (e.g. to assign bibs and starting zones, create different categories, establish the results by category, check entries, resolve problems), for financial summaries, and for the marketing services detailed above. The data that is not essential for registration and sign up is marked as optional.

T-shirt sizes are needed partly to be able to order the right quantity of each size of the T-shirts for the given race, and partly to have this information for future events when we provide complimentary T-shirts – this way we can have an estimate on the amount of T-shirts needed for each size. Therefore, if we ask for the T-shirt size upon registration it does not automatically mean that a complimentary T-shirt is provided at the given race – only if the registration fee section in the information of the event specifically says so.

Basic data:

- ID in the database (runner ID)
- full name, name suffix,
- date of birth
- permanent / mailing address,
- phone number,
- e-mail address,
- sports club (if applicable, not mandatory – it appears in the start list and results list, according to international practice),
- chip number of the runner's own chip (if applicable, not mandatory),
- whether the runner agrees to receive other information and e-mails regarding future events and opportunities,
- last used billing name and address (generated automatically if somebody asks for an invoice through our online system – this is for the convenience of our customers so that it's not necessary to type it in every time),

Additional data recorded about participants who sign up through the online registration system:

- online ID,
- username,
- encrypted password,
- transaction ID upon paying online with card, which is necessary for financial control and for problem solving.

Data regarding the different races:

- the goal time and actual finish time of the race (or the distance traveled, in case of timed races), category, place, part times in certain cases,
- paid registration fee, type of discount, payment method and date
- bib pick-up, confirmation, date of deferral,
- T-shirt size,
- other remarks related to the administration (deferring the entry, clarifying payment issues, transferring the entry to another individual, etc.).

Deleting your data

Our customers can ask us any time to delete their personal data from our database under the law. If you have already registered for an event, you have to retrieve from the competition at the same time.

Even if the data subject has withdrawn his consent, under Section 6 (5) of the Privacy Act we will be able to store the data where this is necessary for compliance with a legal obligation pertaining to the controller or for the purposes of legitimate interests pursued by the controller or by a third party. Our legal obligations include complying with audits, for which we need the payment data stored in the database. Our legitimate interest is to save the integrity of the database. That is why for technical reasons (due to the structure of databases) we cannot delete data which is closely linked to other data (eg. external key) It is our legal obligation, and at the same time it is our legitimate interest and obligation to third parties to save the backups so as to be able to restore the database if it has been damaged. Data from the backups cannot be deleted, only from the production server. Only the system administrator can have access to the backups, and we only use them in case of malfunctioning to restore the system. It is our legitimate interest to be able to get statistical data from our database so that the number and statistical composition of entrants will remain the same. It is the legitimate interest of third parties that we should be able to track who registered them for the event concerned. (If you have registered someone, then that person might have problems if we cannot clarify the details of registration). If a team member asks us to have his/her data deleted, we do not want to delete the registration and results of the whole team.

Consequently, we can only delete the data of those customers who have never registered for any of our events, have not bought any products and services from us, that is to say they have only created an account. The data of those people who registered in person, or transferred the registration fee, that is to say there is no important data about them in our online registration system, can be deleted from the online registration system – however, the necessary data will remain in our main database. Apart from that, we delete their name, their address, the name of their club, the name of the person who 'should be contacted in case of an accident', the name of their company if it is given, their last used billing name and address, or any other data recorded which is not necessary to save the integrity of our database.

If you have already had your data deleted, you can register for our events again in the future, but we cannot take into consideration your previous registrations.

Legal remedies

If you think your rights to the protection of your personal data have been violated by DSA or any of its employees, please contact DSA using any of our contact details so that we can solve the problem as soon as possible. Our contact details can be found at the beginning of this document.

If you assume that DSA has not taken the necessary steps to solve your problem, you can go to court, or you can contact the Hungarian National Authority for Data Protection and Freedom of Information.
